

vDefend SSP 5.1.2 — Installer 部署 (rtolab)

kosten-ssp.rtolab.local @ 192.168.114.66 · 2026-06-17

部署狀態

Installer appliance 已上線，UI HTTP 200

- **Appliance: ssp-installer · 4 vCPU / 6 GB / 396 GB · 1 NIC · pg114**
- IP: 192.168.114.66 FQDN: kosten-ssp.rtolab.local
- **UI: <https://kosten-ssp.rtolab.local/> → HTTP 200 (ready)**
- 帳號 (sysadmin / admin / audit / GRUB) = VMware1!VMware1!
- DNS: kosten-ssp A + PTR @ .66 已建；self-signed cert (CN=FQDN，無 SAN) 已匯入信任 root
 - cert 4006F091...115D 無 SAN → Chrome 仍報 ERR_CERT_COMMON_NAME_INVALID
- **IP 歷程：原配 .55 落在舊 521 保留段 (.50-.58, kosten-vcf521-sddc)**
 - 改配 .66 — DNS 反解 + lab-info/inventory + ping 三方確認乾淨；521 記錄未動

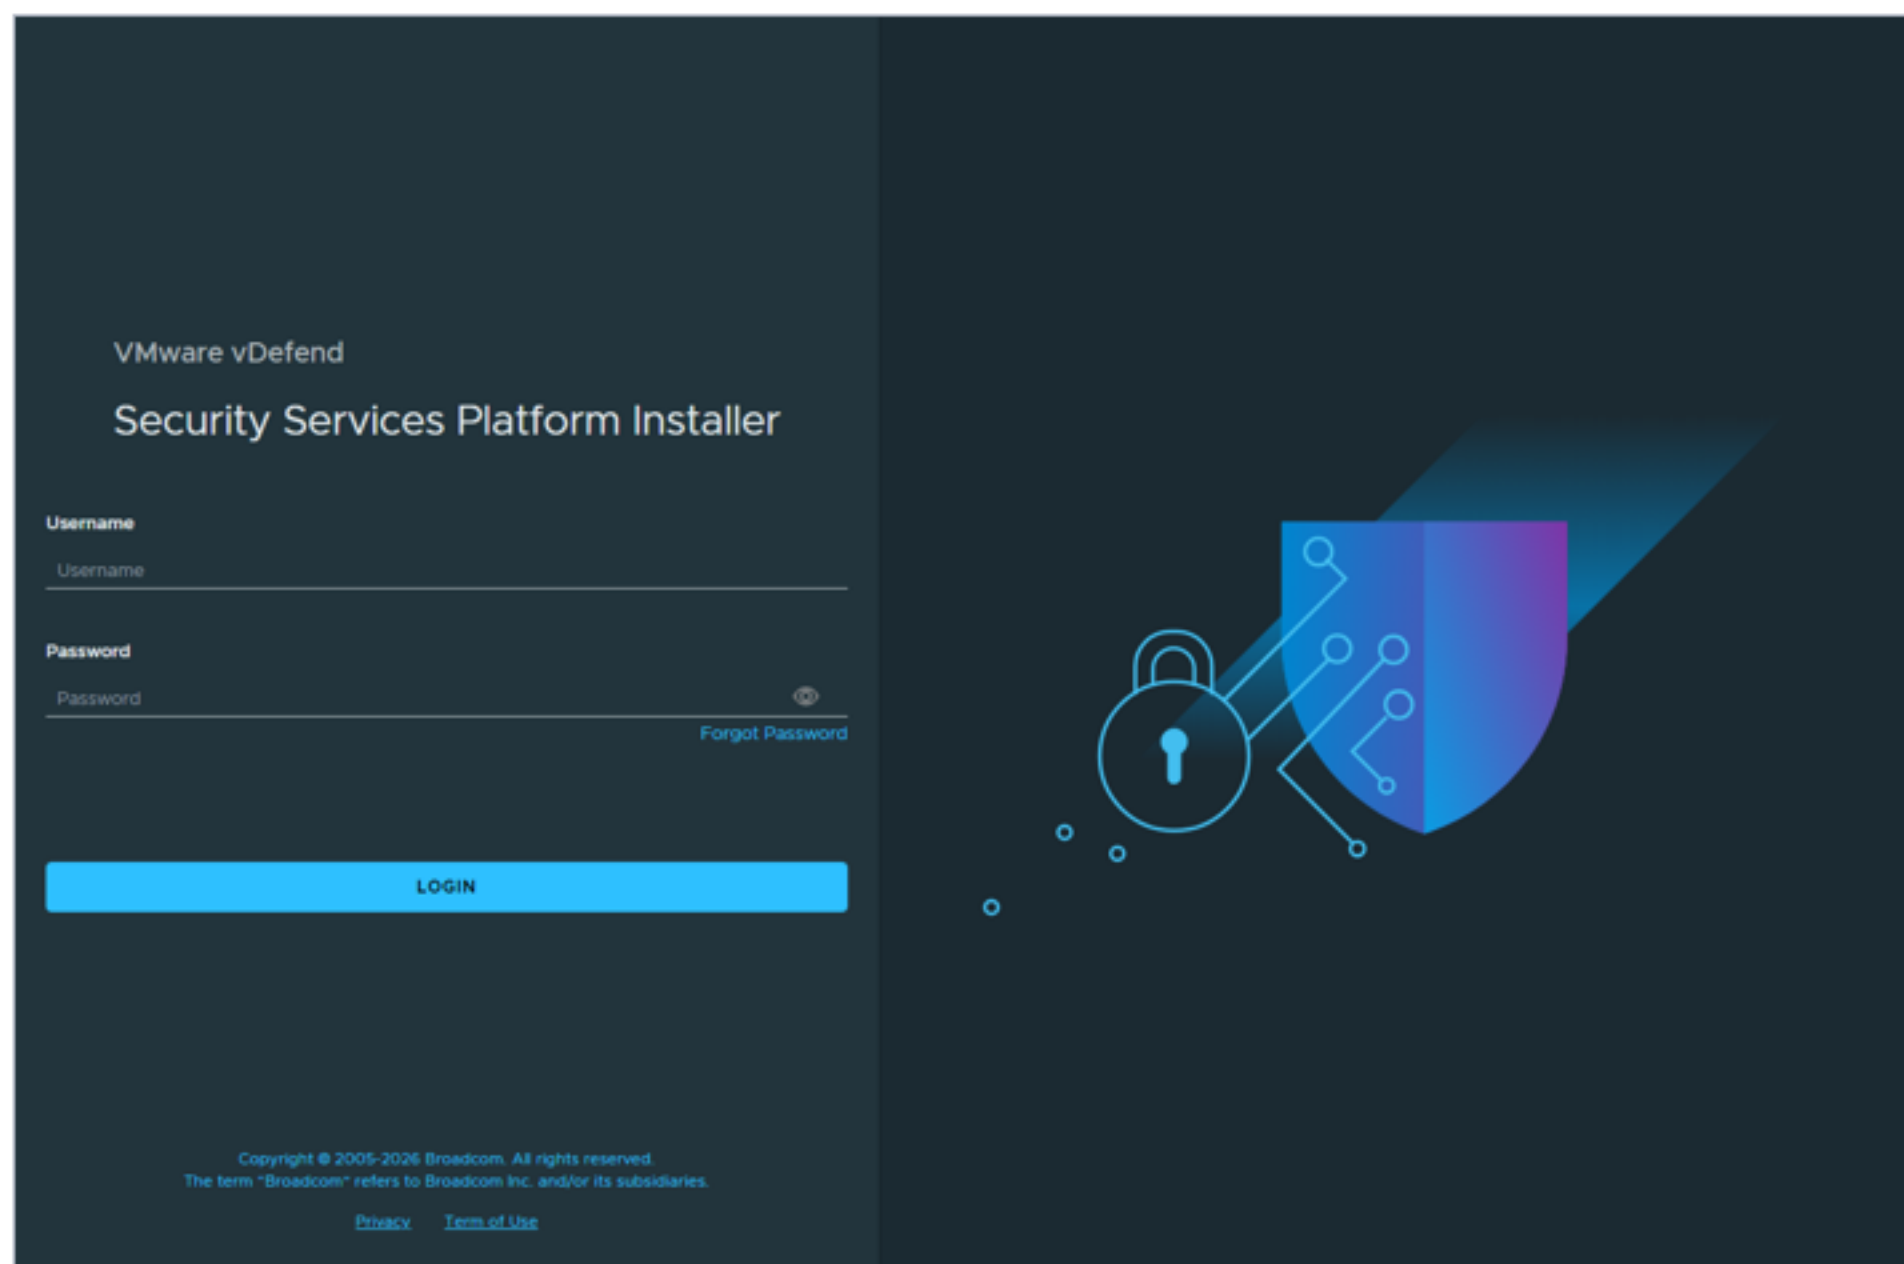

Console — firstboot

cloud-init 完成 ; SSP 服務 secop / depot / registry 啟動 ; sspi-custom.target reached

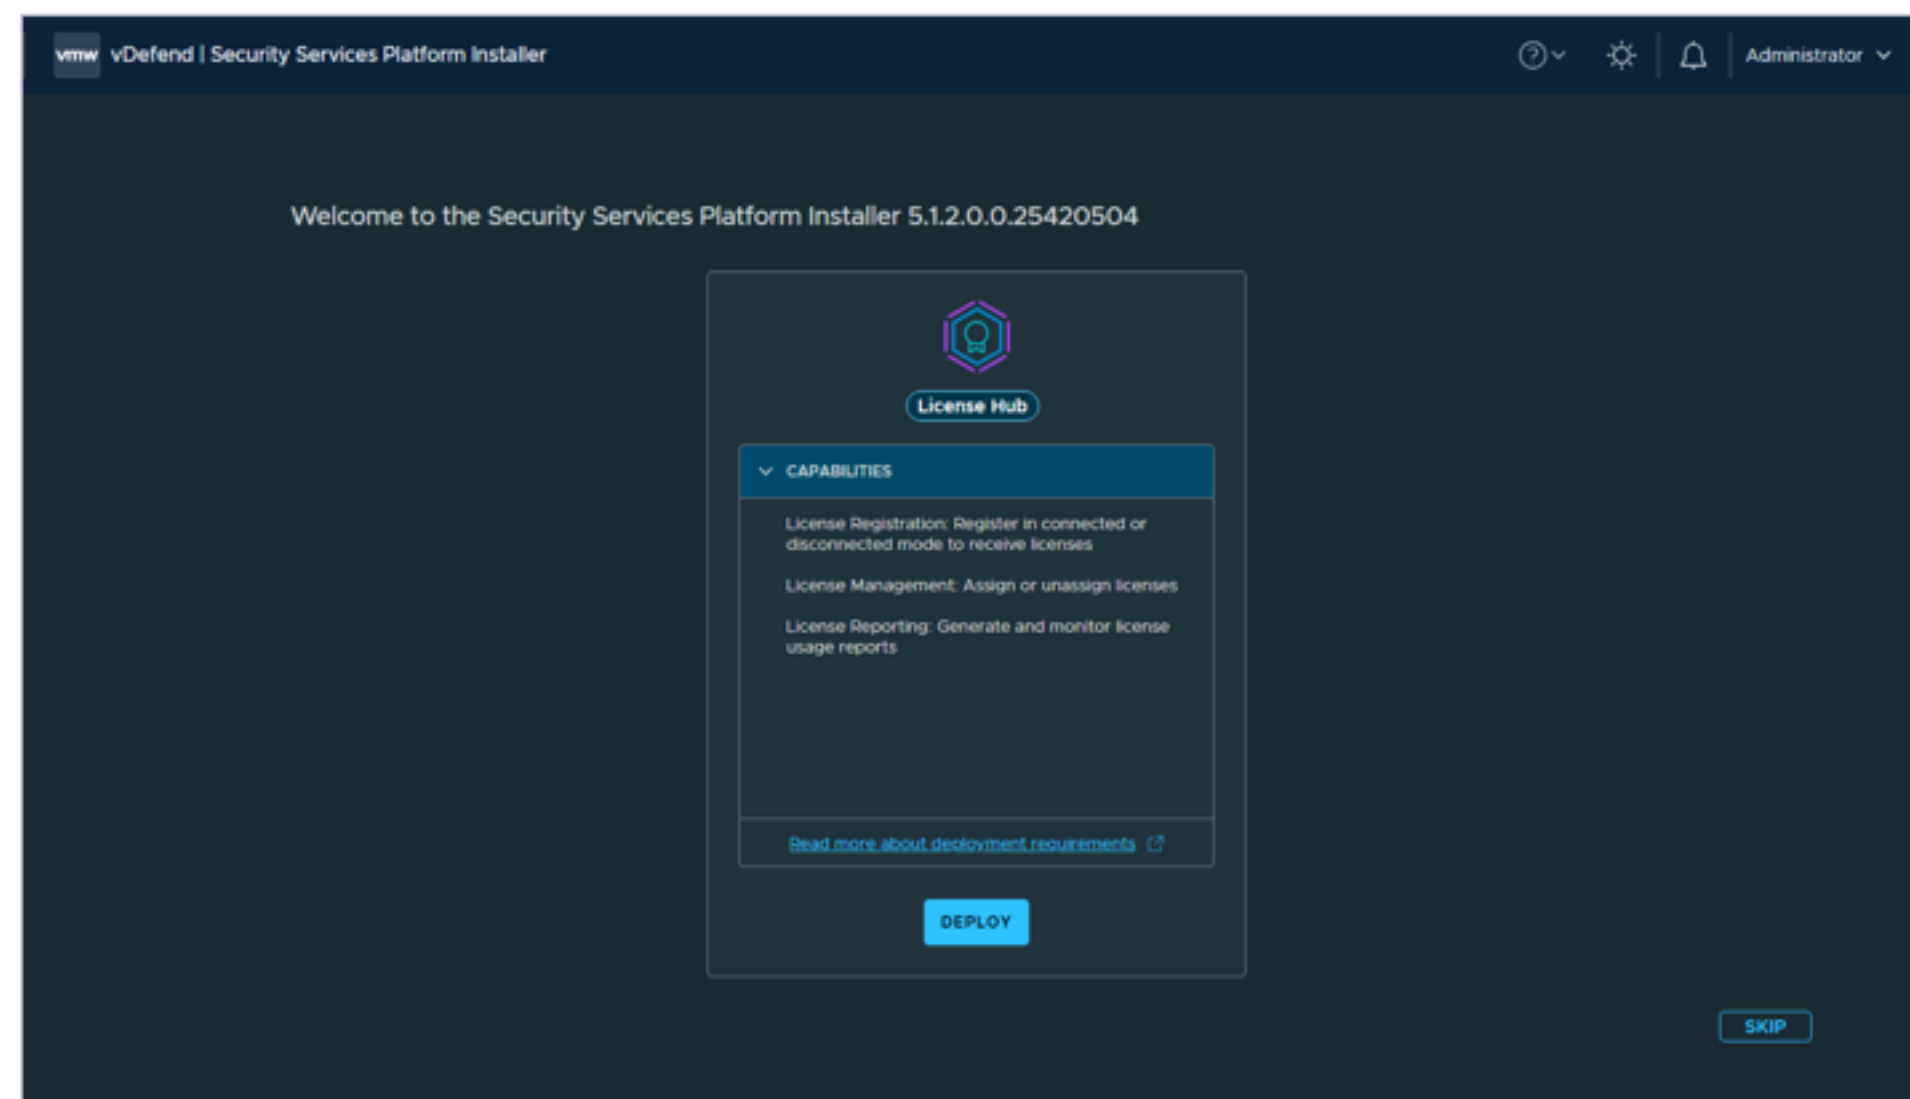

```
Starting depot.service - Depot service...
[ OK ] Started dmesg.service - Save initial kernel messages after boot.
[ 108.569590] cloud-init[5367]: Cloud-init v. 1:23.2.2-0ubuntu0~22.04.1nn3 finished at Wed, 17 Jun 2026 02:39:41 +0000. Datasource DataSourceOVF [seed=com.vmw.re.guestInfo]. Up 108.55 seconds
Starting e2scrub_reap.service - Remove Stale Online ext4 Metadata Check Snapshots...
Starting grub-common.service - Record successful boot for GRUB...
Starting modprobe@configfs.service - Load Kernel Module configfs...
Starting modprobe@dm_mod.service - Load Kernel Module dm_mod...
Starting modprobe@drm.service - Load Kernel Module drm...
Starting modprobe@efi_pstore.service - Load Kernel Module efi_pstore...
Starting modprobe@fuse.service - Load Kernel Module fuse...
Starting modprobe@loop.service - Load Kernel Module loop...
Starting podman-auto-update.service - Podman auto-update service...
Starting podman-clean-transient.service - Clean up podman transient data...
Starting podman.service - Podman API Service...
[ OK ] Started registry-fs-watchdog.service - mount registry bundles.
[ OK ] Started secop-api-helper.service - Secop Api Helper.
Starting stats.service - Logs system statistics...
Starting systemd-update-utmp-runlevel.service - Record Runlevel Change in UTMP...
[FAILED] Failed to start cleanup-cns-volume-requests.service - Cleanup successful CNS volume operation requests.
See 'systemctl status cleanup-cns-volume-requests.service' for details.
[ OK ] Finished modprobe@configfs.service - Load Kernel Module configfs.
[ OK ] Finished modprobe@dm_mod.service - Load Kernel Module dm_mod.
[ OK ] Finished modprobe@fuse.service - Load Kernel Module fuse.
[ OK ] Started podman.service - Podman API Service.
[ OK ] Finished e2scrub_reap.service - Remove Stale Online ext4 Metadata Check Snapshots.
[ OK ] Finished modprobe@drm.service - Load Kernel Module drm.
[ OK ] Finished cloud-final.service - Execute cloud user/final scripts.
[ OK ] Finished modprobe@efi_pstore.service - Load Kernel Module efi_pstore.
[ OK ] Finished modprobe@loop.service - Load Kernel Module loop.
[ OK ] Reached target cloud-init.target - Cloud-init target.
[ OK ] Finished systemd-update-utmp-runlevel.service - Record Runlevel Change in UTMP.
[ OK ] Finished grub-common.service - Record successful boot for GRUB.
Starting grub-initrd-fallback.service - GRUB failed boot detection...
Stopping registry.service - SSPI Registry server...
[ OK ] Finished podman-clean-transient.service - Clean up podman transient data.
[ OK ] Stopped registry.service - SSPI Registry server.
[ OK ] Finished grub-initrd-fallback.service - GRUB failed boot detection.
[ OK ] Started registry.service - SSPI Registry server.
[ OK ] Finished podman-auto-update.service - Podman auto-update service.
[ OK ] Started libpod-370e108b82819eda046c6bbea381bf4106ad26443de23fb4d11ef557e46578eb.scope - libcrun container.
[ OK ] Started depot.service - Depot service.
Starting secop.service - LCM Secop service...
[ OK ] Started libpod-1df4a235543afaf6393083b8f9a35c90f68cd2781f30b327ce42bd4f207ec85c.scope - libcrun container.
[ OK ] Started secop.service - LCM Secop service.
[ OK ] Reached target sspi-custom.target - SSPI Custom Target.
[ OK ] Finished stats.service - Logs system statistics.
```

SSP Installer UI — 實機截圖

<https://kosten-ssp.rtolab.local/> 登入頁 + 已登入 (admin / ENTERPRISE_ADMIN)

login.html — VMware vDefend SSP Installer

已登入 welcome — License Hub capabilities

cert 為 self-signed 且無 SAN → Chrome 直連會 ERR_CERT_COMMON_NAME_INVALID ; 截圖用 headless Chrome (--ignore-certificate-errors + host-resolver MAP→.66) 渲染實機 UI , 已登入頁用 CDP 注入 session cookie 擷取。

License Hub 上傳 — LICENSE bundle READY

4.46 GB tar 經 depot REST API server-side pull 註冊完成 (免瀏覽器，繞過 cert 牆)

- depot REST 流程 (envoy:443，全程 -SkipCertificateCheck，無瀏覽器)：
 - POST /sspi/iam/login → 200，取 cookie + x-xsrf-token (寫操作必帶 X-XSRF-Token，否則 401)
 - GET /sspi/depot/health → 204 (depot healthy)
 - POST /sspi/bundles/remote?type=LICENSE body {url: http://172.16.10.32:8000/License-Hub-...tar}
 - → 202 ; appliance server-side pull (urllib3, Range resume)，4.46 GB，無 client buffering
 - poll GET /sspi/bundles/{id} : IN_PROGRESS 38→70→87% → READY 100% [OK]
- depot 現況 (GET /sspi/bundles, total=2)：
 - INSTALLER VMware-SSPI-bundle-5.1.2.0.0.25420504 · IN_USE · 2.10 GB
 - LICENSE License-Hub-5.1.2.0.0.25400319 · READY · 4.46 GB ← 本次上傳

下一步 — Platform stand-up (pending)

- License Hub (LICENSE bundle) 已上傳 depot — READY
- 跑 platform 安裝 wizard (depot 已備 INSTALLER + LICENSE bundle)
- 整合 VCF 9.1 NSX @ 192.168.114.13 (作為 SSP target)
- platform node IP : 三方確認後從乾淨區塊選 (DNS+lab-info+ping) ; .55-.59 是 521 保留不可用
- driver : installer REST API (/sspi/* + X-XSRF-Token) 全程可自動化、免瀏覽器
 - platform wizard 的 UI 截圖會卡 EULA modal — 需先接受 EULA (使用者授權後再點)
